PROFESSIONAL SUMMARY

- Principal Enterprise Architect with over 15 years of experience turning technology strategy into sustained business outcomes across **Gartner**
- At **Gartner**, served as a core member of the centralized Enterprise Architecture organization responsible for driving architecture standards, s ecurity alignment, and cross-functional adoption for all business units.
- Partnered closely with Security and Cloud & Platform Engineering to ensure enterprise initiatives were secure, governed, and anchored in m easurable associate experience improvements.
- Recognized for connecting executive strategy to execution, bridging complex technology architectures with the people and process changes that make adoption real.
- Brings a balance of strategic vision, technical credibility, and empathetic leadership to enterprise-scale transformation.

CORE COMPETENCIES

Enterprise Architecture Governance | Technology Change Leadership | Cloud & Security Strategy | Program Orchestration
Associate Experience Enablement | FinOps & Value Realization | DevOps & Version Control Systems
Analytical Problem Solving | AI Solutions & Intelligent Automation | Technical Strategy & Innovation

CERTIFICATIONS: SAFe Agilist, CISSP, AWS Professional Architect, TOGAF Foundation, Salesforce Certified - Trailhead

EXPERIENCE

GARTNER | Senior Director, Enterprise Principal Architect, EA Cloud and Governance | 2016 – October, 2025

Bridge Between Strategy and Execution

- Served as a primary architect within Gartner's central Enterprise Architecture team, partnering with Security and Cloud & Platform Engi neering to translate executive technology goals into repeatable architecture standards and platform models.
- Coordinated enterprise-wide initiatives that modernized the digital workplace, enhanced associate productivity, and simplified governa nce across business units.
- Functioned as the liaison between strategy and technical execution,helping diverse teams plan, communicate, and sustain change whil e maintaining operational integrity.

Enterprise Architecture & Governance

- Directed the Architecture Review Board (ARB) and Lifecycle Security and Risk Review (LSRR) processes for key enterprise applications, e nsuring solutions met security, scalability, and governance standards.
- Architected Gartner's central CMDB framework to create end-to-end visibility into technology assets, risk exposure, and associate facin g platform dependencies — improving compliance and GRC alignment.
- Partnered with business leaders and Comms to develop multi-channel adoption strategies, ensuring technology changes were embrace d by employees globally.

Cloud Strategy & Platform Modernization

- Helped define the enterprise multi-cloud blueprint and landing zones for AWS and Azure, standardizing security guardrails and connecti vity patterns across business units.
- Worked closely with the Cloud & Platform Engineering (C&PE) team to implement Terraform-based infrastructure-as-code and GitOps p ipelines, reducing provisioning time and enforcing policy compliance at scale.
- Supported key modernization programs that migrated hundreds of legacy apps to cloud, eliminating technical debt and achieving signifi cant operating savings.

Security Integration & Enterprise Resilience

- Acted as the Enterprise Architecture POC for the Security Business Unit, ensuring security design requirements were embedded throug hout the software development lifecycle.
- Drove enterprise adoption of modern security tools and governance platforms including Wiz, Snyk, Cribl, OneTrust, and SingularAI — enabling shift-left security and automated risk visibility.

- Led identity modernization through Okta SSO integration across core applications, simplifying access management and improving assoc iate experience without compromising security.
- Designed resilience patterns validated through chaos testing, ensuring Tier 1 applications could recover seamlessly across regions.

Associate Experience & Integration

- Architected enterprise-wide integration between Workday, Conference Platforms, GBS, GTS, HRIT, and DocuSign, streamlining onboardi ng and HR compliance processes.
- Partnered with Corporate Communications and HR to develop communication and training frameworks supporting major platform roll outs.
- Used data-driven feedback and experience metrics to continuously refine architectural decisions and prioritize associate impact.

Financial & Operational Stewardship

- Introduced a FinOps governance model integrated with Jira and PowerBI for real-time visibility into cloud spend, highlighting optimizati on opportunities and redirecting savings to innovation funding.
- Advised executive leadership on strategic architecture investments, balancing cost efficiency with scalability and future-readiness.

Leadership & Collaboration

- Partnered with BUleaders and business executives to align technology initiatives with strategic goals and associate experience priorities
- Mentored architects and senior engineers on governance, stakeholder engagement, and program leadership within the centralized EA practice.
- Recognized with the Gartner(CEB) Leadership Excellence Award for fostering cross-team alignment and delivering value-driven enterpri se architecture outcomes.

THOMSON REUTERS | Software Systems & Release Manager | 2008 – 2012

Owned release engineering and quality assurance for a mission-critical platform supporting hundreds of financial-services clients, where uptime, accuracy, and trust were non-negotiable.

- Managed the **end-to-end release lifecycle** for high-volume, transaction-heavy systems, maintaining 100% data integrity through peak loads and market events.
- Designed and rolled out **automated build and deployment pipelines** that cut human error in releases by 50% and materially improved uptime and stability.
- Established a **"zero-downtime" release culture**, enabling frequent updates to complex data feeds and services without disrupting client-facing operations.
- Introduced structured **performance and resilience testing** (using tools like LoadRunner, JMeter, and service-level testing frameworks) to ensure systems scaled with growing client and data demands.
- Collaborated with development, operations, and business stakeholders to prioritize risk, streamline change approvals, and make release readiness a shared responsibility.
- Built a culture of **continuous improvement** within the release and QA teams, using post-release reviews and incident learnings to refine processes and automation over time.

FREIGHTLINER (Daimler Trucks) | Senior Performance Engineer / QA Lead | 2006 - 2008

Led quality assurance and performance engineering for mission-critical global supply chain platform (OWL), managing teams responsible for end to-end software lifecycle reliability during a period of rapid international expansion.

- Directed teams of **8+ performance engineers and QA specialists**, overseeing testing strategy, execution, and optimization for complex logistics and supply chain applications serving multiple continents.
- Established **performance testing frameworks and SLAs** to ensure systems could handle peak global shipping volumes, seasonal demand surges, and real-time inventory synchronization across distributed warehouses.
- Drove **load and stress testing initiatives** for enterprise applications, identifying and resolving bottlenecks that supported Daimler Truck's aggressive growth targets and just-in-time manufacturing requirements.
- Implemented **early automation practices** for regression and integration testing, laying foundational discipline that accelerated release confidence and reduced manual validation cycles.
- Collaborated with supply chain operations, development, and manufacturing stakeholders to align software quality metrics with business KPIs like delivery accuracy, inventory turns, and order fulfillment velocity.
- Mentored junior engineers while managing cross-functional testing ceremonies, fostering accountability and technical excellence within high-pressure, deadline-driven environments.
